RESPONSE TO AMENDMENT

Request for Continued Examination

1. The Request for Continued Examination (RCE) under 37 CFR 1.53 (d) filed on July 5, 2007 is acceptable and a RCE has been established. An action on the RCE follows.
2. Claims 1-3, 5-16 and 18-22 are pending in the application, claims 4 and 17 have been cancelled.
3. Amendments to the claims, filed on June 5, 2007, have been entered in the above-identified application.

Terminal Disclaimer

4. The terminal disclaimer filed on June 5, 2007 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of application 10/920,037 has been reviewed and is accepted. The terminal disclaimer has been recorded.

WITHDRAWN REJECTIONS

5. The Double Patenting rejection, made of record in the office action mailed April 5, 2007, page 3, paragraph #5 has been withdrawn due to Applicant's timely filed terminal disclaimer filed June 5, 2007.
6. The 35 U.S.C. §102 rejection of claims 1-22 over Edgman (US Publication No. 2002/0192431 A1), made of record in the office action mailed April 5, 2007, page 4, paragraph #7 has been withdrawn due to Applicant's amendment in the response filed June 5, 2007.

REJECTIONS

7. **The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.**

Claim Rejections - 35 USC § 102

8. Claims 1-3, 5-16 and 18-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakao (U.S. Patent No. 5,443,887).

Regarding Applicant's claims 1, 5, 7, 9, 11, 14, 20 and 22, Nakao discloses a component comprising: a metal substrate having a perforation (*col. 6, line 21*); and a composite outer layer comprising a plastic and at least one filler, wherein the filler is selected from the group consisting of cellulosic fillers and inorganic fillers (*col. 6, lines 26-27 and col. 2, lines 1-5 and lines 40-42*), said composite formed on said substrate such that all sides of said substrate are coated by said outer layer and said composite passes through said perforation in said substrate (*col. 1, lines 12-13, col. 6 lines 11-20 and the figures*).

Regarding Applicant's claims 2, 3, 10, 15 and 16, Nakao discloses the substrate is a sheet (*figures 1 and 2*) and substrate is deemed to have a higher bending strength than a comparable size piece of said composite, since Nakao's component has the same claimed structure and composition.

Regarding Applicant's claims 6, 12 and 19, Nakao discloses said plastic is selected from the group consisting of polyethylene, polypropylene, and polyvinyl chloride (*col. 4, lines 3-29*).

Regarding Applicant's claims 8, 13 and 21, the limitation "said composite is formed about said substrate by a process selected from the group consisting of extrusion, compression

molding, and injection molding” is a method limitation and does not determine the patentability of the product, unless the process produces unexpected results. The method of forming the product is not germane to the issue of patentability of the product itself, unless Applicant presents evidence from which the Examiner could reasonably conclude that the claimed product differs in kind from those of the prior art. MPEP 2113. Furthermore, there does not appear to be a difference between the prior art structure and the structure resulting from the claimed method because Nakao discloses claimed structure of claims 1, 9 and 14.

Regarding Applicant’s claim 18, Nakao discloses said substrate has a plurality of perforations through which the composite passes (*figures 1 and 2*).

ANSWERS TO APPLICANT’S ARGUMENTS

9. Applicant’s arguments in the response filed June 7, 2007 regarding the previous rejections of record have been considered but are moot since the rejections have been withdrawn.
